

Pizza Sales Analysis

Problem Statement

Objective. Analyze pizza sales data to evaluate business performance, identify important sales trends, understand customer preferences, and determine the best- and worst-performing pizza products.

KPI Requirements

We need to analyze key indicators for the pizza sales data to gain insights into overall business performance. The analysis should calculate the following metrics:

1. **Total Revenue:** The sum of the total price of all pizza orders.
2. **Average Order Value:** The average amount spent per order, calculated by dividing total revenue by the total number of orders.
3. **Total Pizzas Sold:** The sum of the quantities of all pizzas sold.
4. **Total Orders:** The total number of orders placed.
5. **Average Pizzas per Order:** The average number of pizzas sold per order, calculated by dividing the total number of pizzas sold by the total number of orders.

Chart Requirements

The analysis should visualize different aspects of the pizza sales data to identify patterns, compare performance, and understand key trends.

1. Daily Trend for Total Orders

Create a **bar chart** displaying the daily trend of total orders over the available time period. This visualization should help identify patterns and fluctuations in order volumes on a daily basis.

2. Monthly Trend for Total Orders

Create a **line chart** illustrating the monthly trend of total orders throughout the available period. This visualization should help identify periods of higher or lower order activity.

3. Percentage of Sales by Pizza Category

Create a **pie chart** showing the distribution of sales across different pizza categories. The visualization should provide insights into the popularity of different categories and their contribution to overall sales.

4. Percentage of Sales by Pizza Size

Create a **pie chart** representing the percentage of sales attributed to different pizza sizes. This visualization should help understand customer preferences for pizza sizes and their impact on sales.

5. Total Pizzas Sold by Pizza Category

Create a **funnel chart** presenting the total number of pizzas sold for each pizza category. The visualization should allow comparison of sales performance across different categories.

6. Top 5 Best Sellers

Create **bar charts** highlighting the top 5 best-selling pizzas based on:

- Revenue
- Total Quantity Sold
- Total Orders

These visualizations should help identify the most popular and highest-performing pizza options.

7. Bottom 5 Best Sellers

Create **bar charts** showcasing the bottom 5 pizza products based on:

- Revenue
- Total Quantity Sold
- Total Orders

These visualizations should help identify underperforming or less popular pizza options.

Expected Outcome

The completed analysis should provide an interactive view of pizza sales performance and make it easier to:

- Monitor key sales KPIs.
- Identify daily and monthly ordering trends.
- Compare revenue contribution across pizza categories and sizes.
- Identify the highest-performing pizza products.
- Identify underperforming pizza products.
- Understand customer preferences and overall sales patterns.

Project Deliverables

SQL-based analysis of the pizza sales dataset and an interactive Power BI dashboard presenting the required KPIs and visualizations.
